### Smithland Project Conducts Fall Protection Training

C.J. Mahan Construction Company (Mahan) firmly believes that one accident is too many, which is why safety is a core company value with the focus on helping their employees utilize solid safety processes. Training, planning and learning to make the correct safety decisions while having the right and responsibility to stop any unsafe operation are just a few of the safety processes that their employees use every day.

With this safety philosophy in mind, Mahan conducted Fall Protection Training with its employees and some major subcontracted employees at their Smithland Powerhouse Project on November 14 and 15, 2014. United Sales Associates instructor Richard Vaccaro trained a total of 226 employees during three on-site training sessions and covered topics including: A) Anchorage, B) Body Support, C) Connecting Means, and D) Decent and Rescue. A demonstration vehicle was utilized by Mr. Vaccaro to exhibit these ABC's of Fall Protection.

From their management and safety council conceptualizing the safety processes, to the safety staff providing the necessary training and technical support on projects, Mahan stands firmly behind their culture of safety and will continue to provide avenues for their employees to achieve the goal of zero accidents.
